

OVERVIEW

A real-time biometric activation built for live environments

The Quadient Stress Dashboard is an interactive experience designed for events, exhibitions, and workplace activations. Participants wear a Polar heart rate sensor while their physiological response is visualised instantly on a shared screen — translating biometric data into a clear, engaging narrative of "stress" using colour, motion, and light-touch office humour.

The system is built for efficient throughput, allowing a single operator to manage multiple participants consecutively with minimal intervention.

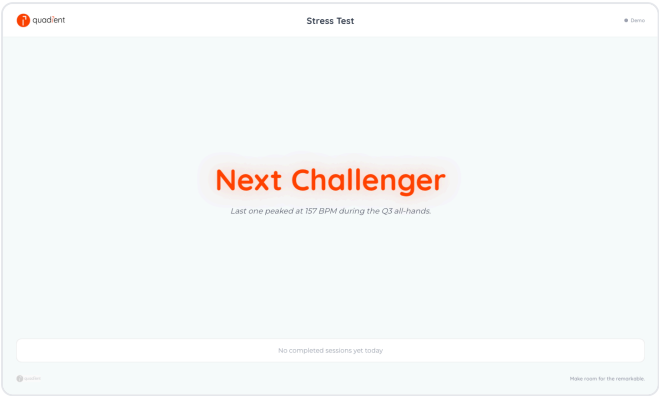

WHAT THE EXPERIENCE MEASURES

Heart rate mapped to five cognitive stress zones

Each session begins with a short baseline calibration (~10 seconds), adapting dynamically to the individual's resting level so results are relative and comparable across participants.

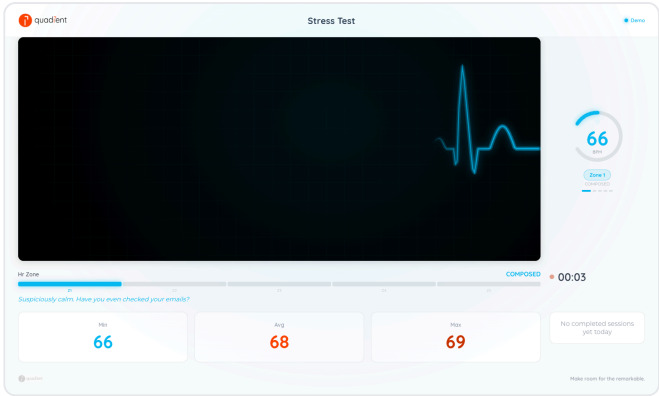

ZONE	LABEL	BPM RANGE	COLOUR
Z1	 Composed	< 72 BPM	Quadient Blue
Z2	 Aware	72–82 BPM	Violet
Z3	 Tense	83–94 BPM	Orange
Z4	 Stressed	95–111 BPM	Red-Orange
Z5	 Overloaded	112+ BPM	Deep Red

Three states — Idle, Active, Complete

Idle

"Next Challenger" holding state with rotating workplace prompts. The event leaderboard builds in the background throughout the day.

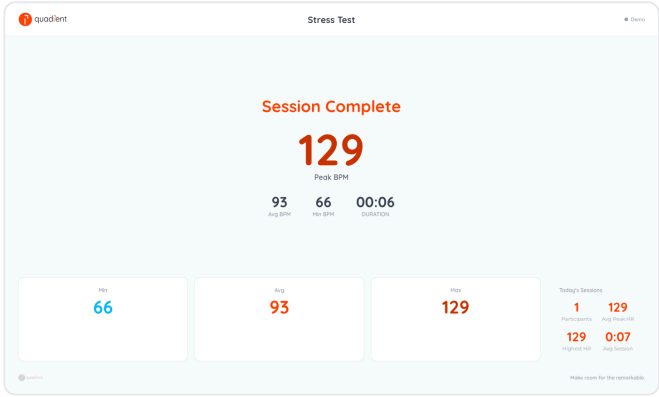

Active Session — Composed (Z1)

Live ECG waveform, BPM ring, zone gauge, session timer, and Min/Avg/Max stats. Blue — participant is calm.

Active Session — Overloaded (Z5)

All visuals shift to deep red. The waveform intensifies, gauge fills, and the ambient background glow matches the zone.

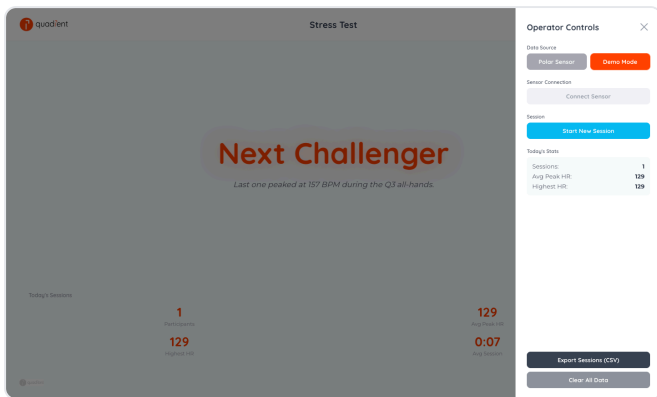

Session Complete

Peak BPM as the headline result, with Avg, Min, and Duration below. The event leaderboard updates at the bottom.

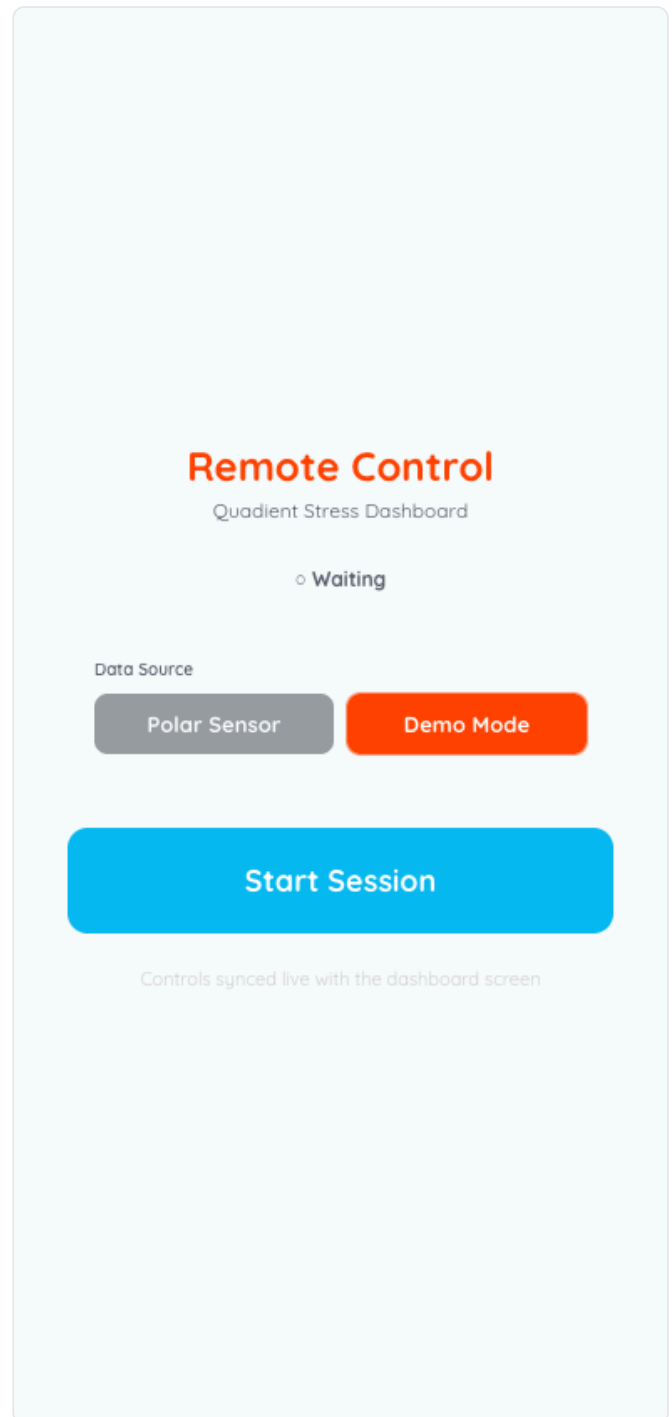

OPERATOR CONTROL

Full control without disrupting the main display

Operator Panel

Slides in from the right edge. Switch data source, manage the Polar sensor, start/end/reset sessions, export a CSV, and clear data between activations.

Remote Control — Operator's Phone

A secure PIN link opens a mobile control view. Start, end, and reset sessions from anywhere in the room, synced live to the main display via Firebase.

TECHNICAL NOTES

A few things worth knowing

- **No sensor required to demo** — a built-in simulation mode runs the full experience without any hardware
- **All data stays local** — nothing is stored externally; session stats persist in the browser for the duration of the event
- **Brand-ready** — colours, typography, and UI reflect Quadient's visual identity throughout

IDLE SCREEN — ROTATING EVERY 5 SECONDS

"Last one peaked at 157 BPM when the photocopier jammed mid-presentation."

"The fax from accounts still hasn't arrived. It's been three days."

"Think you're calmer than your manager? The overhead projector says otherwise."

"Your in-tray has 47 items. The one at the bottom has been there since before anyone can remember."

"It's just the annual appraisal. The form is four pages. In triplicate."

"Someone booked the only meeting room. For the whole day. Just for themselves."

"Your 9am became a 3pm. The memo never made it round."

COPY & MESSAGING

All on-screen copy is customisable — or can be removed entirely

The dashboard includes a library of contextual puns written for an office environment, zone-aware and rotating throughout each session. All copy can be swapped for brand-specific messaging, neutralised, or switched off.

Z1 — COMPOSED

"Suspiciously relaxed. Have you checked your in-tray lately?" · "Ice in those veins. Your manager is mildly concerned." · "Either very zen or it's not your turn to fix the photocopier today." · "This is fine. The pigeon hole isn't overflowing. Yet."

Z2 — AWARE

"Getting warmer. There's a note on your desk marked urgent." · "A meeting just appeared in the paper diary." · "Someone's left a Post-it on your monitor. It looks serious." · "The pressure is registering. Just like the fax tone."

Z3 — TENSE

"Three memos. All marked urgent. All landed at once." · "Your to-do list just grew by four handwritten items." · "That deadline is closer than it looks. The wall calendar doesn't lie." · "Is that the fax machine going off again?"

Z4 — STRESSED

"The MD wants 'just a quick word' in his office." · "Your 3pm became a 2pm. The receptionist just rang." · "Multiple stakeholders. One overhead projector. No spare bulb." · "Live presentation. Wrong transparency on the projector."

Z5 — OVERLOADED

"Invoice missing. Client calling. Printer jammed. Pigeon hole overflowing." · "All-hands in five. You're presenting. The projector bulb just blew." · "Everyone is waiting. The fax still hasn't arrived. Everyone." · "Deep breaths. The right file is in the cabinet somewhere. Probably."
